## Junior Full-Stack Web Developer

### About Me

I am a full-stack web developer with over 20 years of experience in Information Technology, blending a diverse combination of development, user support, and functional skills and responsibilities. As an accomplished software designer, I take pride in ensuring that I fully understand my users' requirements, and that those requirements are fully and properly implemented in my code. With extensive experience as both a developer and a business systems analyst, I am able to collaborate effectively with all members of any project team, both technical and functional. I am well-accomplished in testing/QA, project/team leadership, and knowledge transfer (both individual and group). I am respectful of deadlines, and ready to go the extra mile to get the job done on time.
